

LAV NARUKA

Unity & VR/XR Game Developer

lovenaruka514@gmail.com · +91-6350150676 · linkedin.com/in/lavnaruka · github.com/6350150676

TECHNICAL SKILLS

Engine	Unity 3D (2022 LTS), Unreal Engine 5 (learning) Languages: C#, C++, Python, Embedded C
XR / VR	OpenXR, Oculus SDK, AR Foundation, Shader Graph, OVR Interaction SDK
Hardware	Arduino (MPU-6050, Pulse Sensor), FPV Systems, Betaflight, Serial Communication
Networking	Photon PUN (voice & multiplayer), WebSockets, Firebase, Netcode for GameObjects
Gameplay	Physics & Particles, Anim State Machines, Puzzle Mechanics, Turn-Based Logic, RNG, Progression Systems
Mobile	Android/iOS Builds, Performance Profiling, Low-end Device Support
Tools	Git, ProBuilder, DOTween, Blender, ScriptableObjects

WORK EXPERIENCE

Unity Game Developer – RENXO Technologies Pvt. Ltd.

Jul 2024 – Present

Unity · C# · ScriptableObjects · Firebase · WebSockets · DOTween · Android/iOS

- Sole developer for 1+ year — shipped multiple production mobile games end-to-end; owned full architecture, core gameplay systems, build pipelines, and store-ready polish across all titles.
- Built a real-time multiplayer Ludo game with OAuth login, Firebase push notifications, WebSocket game-state sync, and fluid DOTween piece animations.
- Engineered reusable C# systems (puzzle mechanics, turn-based logic, RNG, progression); profiled and resolved bottlenecks delivering stable 60 fps on low-end Android/iOS.

Unity Developer Intern – Caarya

Feb 2025 – Jul 2025

Unity · C# · Photon PUN · Mixamo · Mobile UI

- Integrated Photon PUN voice chat into a live multiplayer project; designed and shipped 2 gameplay levels and built 8 rigged playable characters with custom Mixamo animations.
- Maintained clean asset pipelines and smooth media integration collaborating across disciplines throughout the project lifecycle.

PROJECTS

VR Acrophobia Therapy Game — Unity · C# · Arduino · Oculus SDK · OpenXR

- Designed an immersive therapeutic VR environment with biometric-driven dynamic difficulty — MPU-6050 and pulse sensors via Arduino adapt challenge intensity in real time to the player's live physiological state.
- Integrated sensor data into Unity over serial communication, building a low-latency pipeline for real-time gameplay feedback and adaptive difficulty scaling.
- Architected the full XR interaction layer using Oculus SDK and OpenXR, ensuring a comfortable and responsive experience tailored for acrophobia therapy.

Low-Latency FPV Drone Simulator — Unity · Embedded C · Arduino · Betaflight · FPV System

- Developed a real-time drone simulation bridging Unity and physical hardware via serial communication, enabling interactive FPV navigation testing with authentic feedback.
- Implemented Betaflight-compatible control logic and FPV camera feedback loop in Unity, replicating drone flight dynamics for hardware-in-the-loop validation.
- Built a bidirectional Unity–Arduino communication layer using Embedded C firmware — reusable architecture applicable to XR peripheral and haptic device integration.

PathLock – Direction-Aware Grid Puzzle — Unity 2022 LTS · C# · Mobile

- Designed 20 hand-authored levels (2×2→6×6) with tuned difficulty curves; ScriptableObject-driven pipeline fully decouples level data from game logic for rapid iteration.
- Built touch-input path-validation state machine: 4 tile mechanics, 3 game modes (Normal/Timed/Zen) with mode-specific UI states; owned full UI/UX with cohesive DOTween transitions.

EDUCATION & CERTIFICATIONS

B.Tech – Engineering Physics · NIT Hamirpur

2021 – 2025

Unity Junior Programmer Certified · GATE 2025 Qualified (Computer Science)
