SUMMARY

Unity game developer who ships mobile games end to end: game design, gameplay systems, real-time multiplayer, monetization and store release. Titles live on Google Play and the App Store, including Tango (15K+ players) and Save the Cat, a profitable, self-published physics puzzle.

EXPERIENCE

Unity Game Developer — RENXO Technologies Pvt. Ltd. Jul 2024 – Present

- Shipped **Tango**, a logic puzzle live on Google Play and the App Store with **15K+ players**: designed the ruleset and difficulty curve (3 board sizes × 5 tiers), built the gameplay logic, integrated ads and handled both store releases.
- Shipped **Zip**, a path-drawing puzzle live on Google Play: an 80-level set ordered by a difficulty score, and a real-time DFS hint solver (connectivity pruning + node budget) that never blocks the main thread.
- Built real-time multiplayer (Checkers, Ludo) over WebSockets with in-game chat; integrated Firebase with Google/Apple sign-in and ad mediation (AdMob, Unity Ads, ironSource); held 60 fps on low-end Android and iOS.

Unity Developer Intern — Caarya Feb 2025 – Jul 2025

- Built Photon PUN voice chat and multiplayer for 10 concurrent players.
- Integrated Ready Player Me avatars with Mixamo animations and Cinemachine cameras; delivered 2 gameplay levels and 8 rigged playable characters.

PROJECTS

Save the Cat — self-published under Parlok Studio Live on Google Play

Unity 6 · C# · 2D Physics · AdMob · Supabase

- One-stroke physics puzzle: the drawn line becomes a rigid body with mass. A deterministic, hand-stepped simulation also runs off-screen to prove generated levels winnable before they are served.
- Designed the monetization: rewarded hints, paced interstitials (150 s cooldown, first 3 levels ad-free, never mid-level), a coin-based skin shop and child-directed ad settings for Google Play Families. The game is profitable.
- Daily puzzle with a global Supabase leaderboard; 100+ PlayMode tests.

Online Multiplayer Checkers — RENXO Technologies Android & iOS builds

Unity · C# · WebSockets · JWT · Firebase · AdMob · Meta Audience Network · ironSource LevelPlay

- Dual-WebSocket netcode (lobby + per-match) with heartbeats, exponential-backoff reconnect and session restore across app backgrounding; JWT auth with region-aware routing (NA / UK / India).
- Rules engine with 8 configurable rules (flying kings, forced capture, 8/10/12 boards); Google, Apple and Guest sign-in.

VR Acrophobia Therapy

Unity · C# · Oculus SDK · ESP32 · BLE

- Heart-rate-paced exposure therapy: an ESP32 pulse sensor streams heart rate to Unity over BLE, and virtual height rises only while the patient stays calm.

SKILLS

Engine & languages: Unity (2D/3D, URP, Unity 6), C#, C++, Python

Gameplay & architecture: gameplay systems, level design, difficulty tuning, state machines, EventBus, Service Locator, object pooling, ScriptableObjects

Multiplayer & backend: WebSockets, Photon PUN, Netcode for GameObjects, Firebase, REST APIs, Supabase, JWT, OAuth (Google, Apple)

Monetization & release: AdMob, Unity Ads, ironSource LevelPlay, Meta Audience Network, Google UMP consent, Google Play and App Store publishing

Performance, XR & tools: profiling, memory optimization, GPU instancing, LOD and batching, XR Interaction Toolkit, OpenXR, Git, Blender

EDUCATION & CERTIFICATIONS

B.Tech, Engineering Physics — NIT Hamirpur 2021 – 2025

Unity Junior Programmer (Unity) · Unity VR Development (Unity) · GATE 2025 Qualified (Computer Science)
